

WholeSeal™

APPLICATION RECOMMENDATIONS

- WholeSeal™ must be stored between 5C (41F) and 35C (95F)
- Wear gloves to prevent any skin sensitivity
- Mix the solution thoroughly as the solids content may become separated
- Uniformly and liberally apply coating using a foam brush or roller
- Make sure coating covers the entire surface area
- Allow coating to dry completely before conducting any tests. The use of hot air or oven to accelerate the drying must be evaluated for efficacy.
- In certain cases it might be desirable to apply a second coat
- Since the coating is water soluble, brushes and rollers may be cleaned under warm water and mild detergent.
